

Albarrary Music AP11 Pre-Amplifier

The all new AP11 has been designed to compliment our new generation Mono-blocs, alternatively to provide a worthwhile and convincing upgrade to any high-end system.

The AP11 has quickly gained a reputation for it's sonic purity as well as it's ability to convey a convincing musical message with realism and detail.

Attention to all aspects of the AP11's design and manufacturing detail include a specially designed EMF/RFI shielded mains transformer, all contribute to it's outstanding and critically acclaimed performance.

In addition to a full compliment of line level inputs, an on-board Moving Magnet phono stage is included which adheres precisely to the RIAA equalisation curve and has gained a reputation for it's ability to reproduce every detail and the dynamics of the Vinyl record.

Albarr Music-the history

Albarr Music was founded in the late 1970's following the successful audition and trials of a new and innovative prototype amplifier, it was to become the now legendary M408.

The Albarr M408's were the very first UK amplifier product to adopt the mono bloc format for 2 channel systems, now commonplace.

We were also the very first UK amplifier manufacturer to utilise acrylic as a major engineering material, also now commonplace.

During the early 1980's the M408's became the reference amplifier of choice by many UK reviewers.

Albarr always been at the forefront with product evolution and innovation.

M608 S2 Mono-Bloc Power Amplifiers

The all new M608 power amplifiers have been developed and evolved from the now legendary M408 Mono-Bloc amplifiers. The M608's Series 2 meet the exacting needs of today's high-end audio systems,

The design concept, the careful selection of the precision and sonically superior components, all contribute to the amplifiers outstanding performance.

The all new Series 2 versions utilise our own specially designed EMF/RFI transformer shield which takes noise levels down to a previously unachievable level, resulting in superior sonic and musical performance.

"the Albarrs get right to the heart of the musical message" Steve Dickinson HiFi + issue 90

M1108 S2 Power Amplifiers 'Our Flagship Amplifiers'

Based on the highly successful M608's, the M1108's offer not only higher power levels but give more insight and involvement into the musical performance.

As with the M608's, the subjective power levels are far greater than it's rating would suggest, giving an incredible dynamic range and listening experience. During 'blind' listening sessions, most listeners truly believed that they were listening to a high-end valve based system, a true accolade and testimony to the M1108's capabilities

Benefiting from Albarr's new transformer shielding, the M1108 mono-blocs deliver a true and convincing musical performance.

"Hearing the M1108 is like watching a skilled craftsman at work; one is struck by the economy of effort, the ease and fluidity of movement."

Steve Dickinson HiFi + issue 108
